Phan Hung Thanh

Backend Developer

0898247883 phanhungthanh007@gmail.com https://www.linkedin.com/in/phan-hung-thanh/ Ngũ Hành Sơn, Đà Nẵng

PROFESSIONAL SUMMARY

Backend Developer with hands-on experience building scalable RESTful APIs using Node.js, NestJS, and TypeScript. Skilled in database design, background job processing, queue systems, and third-party integrations. Focused on clean code, performance optimization, and delivering reliable backend systems for real-world products.

SKILLS

Technical Skills:	Node.js, NestJS, Express.js, TypeScript, ReactTS, Tailwind CSS
Databases & Caching:	MongoDB, MySQL, Redis
System:	RESTful API, WebSocket, Swagger, Bull / BullMQ
DevOps:	Docker, Kubernetes (basic), Git (GitHub, GitLab)

PROFESSIONAL EXPERIENCE

Izi Software 04/2024 - Present

Backend Developer

- Designed and developed RESTful APIs for web and mobile applications using Node.js, NestJS, and TypeScript.
- Designed and optimized MongoDB databases, including schema design, migrations, indexing, and query performance tuning.
- Built background jobs and queues using Bull / BullMQ to handle asynchronous tasks and improve system scalability.
- Integrated essential third-party services such as Twilio (SMS) and payment gateways (Sepay, 9Pay, ACB).
- Implemented authentication & authorization with JWT, validation, and security best practices.
- Collaborated with frontend and mobile teams to deliver scalable, reliable backend features.

PROJECTS

Plant & Mineral Identification App (Backend Developer) 03/2025 - 06/2025

Built a RESTful API backend for a mobile application (iOS/Android) that identifies plants and minerals via AI-powered image scanning, serving features from content management to in-app purchases.

- Designed modular NestJS backend with lazy-loaded services, role-based auth (JWT), and job scheduling (Agenda)
- Integrated OpenAI API for plant disease diagnosis and AI-powered care recommendations
- Implemented in-app purchase validation for Apple IAP and Google Play Billing with subscription management
- Developed real-time notification system via WebSocket (Socket.io) and Firebase Cloud Messaging
- Built media processing pipeline for image/video upload and optimization

Nail Salon Management System (Backend developer) 07/2025 - 05/2026

Developing a RESTful API backend for the nail salon chain management system

- Designed and developed RESTful APIs for a multi-branch nail salon management platform using NestJS and TypeScript
- Built appointment scheduling, worker shift management, and customer turn-tracking modules
- Integrated third-party payment gateways (Braintree, PayPal) and communication services (Twilio SMS, SendGrid Email)
- Implemented real-time notifications and updates using Socket.IO with Redis adapter
- Developed role-based access control (RBAC) with JWT authentication and Passport.js
- Integrated AWS S3 for media storage and Google Cloud Vision API for image processing
- Managed campaign and voucher/promotion systems for customer retention

Multi-Vendor Food Delivery Platform (Backend developer) 10/2025 - 04/2026

Backend system for a multi-vendor food delivery platform supporting customers, shippers, store owners, and regional admins — similar to GrabFood/Baemin.

- Built a scalable RESTful API with NestJS + TypeScript serving 4 user roles: customer, shipper, store owner, and admin
- Implemented real-time order tracking and in-app messaging using WebSocket (Socket.io)
- Designed a multi-role access control system with JWT authentication and Passport.js guards
- Integrated Firebase FCM for push notifications, AWS S3 for file storage, and Redis for caching
- Developed core business modules: product catalog, vouchers, shopping cart, order management, reviews, and transaction history
- Followed Clean Architecture principles using base repository pattern, DTO validation, custom decorators, guards, and interceptors

Social Media Automation Platform (Fullstack Developer) 03/2026 - Present

Built a multi-platform social media automation tool enabling users to schedule posts, manage campaigns, and generate AI-assisted content across Facebook, Threads, and more.

- Designed modular NestJS backend with lazy-loaded services, role-based auth (JWT), and job scheduling (Agenda)
- Built AI-powered content generation features using OpenAI and Anthropic APIs
- Implemented real-time notifications via WebSocket and Firebase Cloud Messaging
- Developed subscription & payment system with PayPal integration
- Created multi-workspace management with granular permissions

EDUCATION

FPT Polytechnic 2022 - 2024

Web Programming

4/4
